

AES MINI PROJECT

Name: Ravina yadav

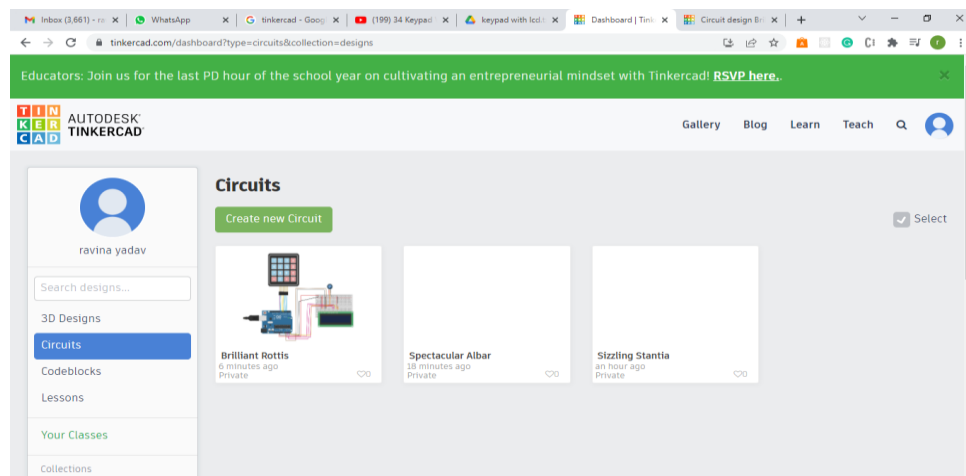

Roll No. : 32

Subject: Msc-C.S part-1

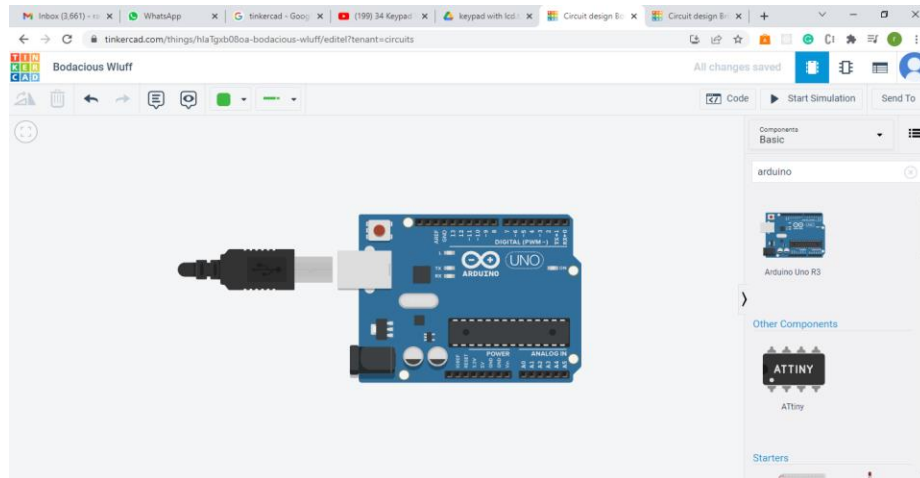

Aim: Using Arduino display temperature on LCD

Soln:

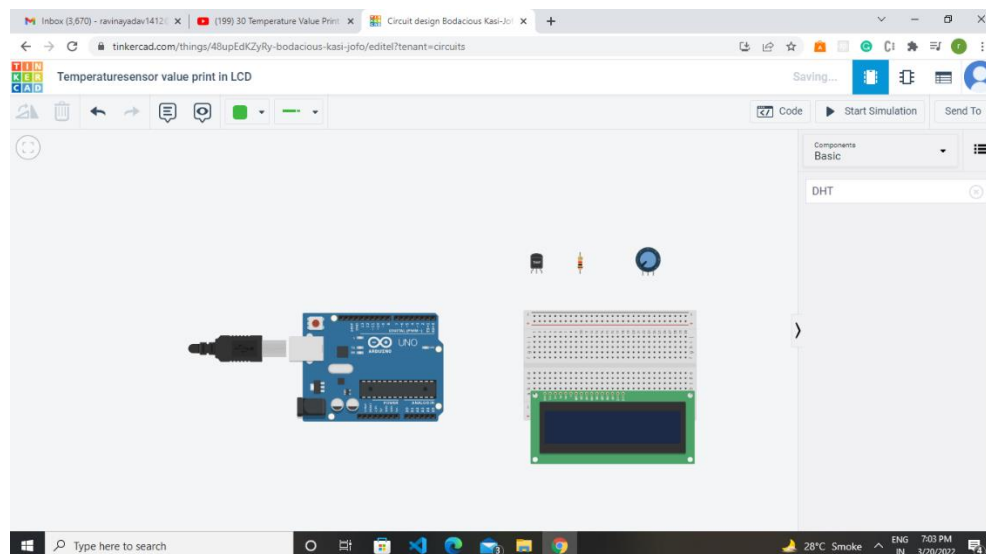

Step1: Open tinkercad and click on circuits and add new circuit.

Step2: Now click on search box and type name of the components needed, and drag the component on the screen.

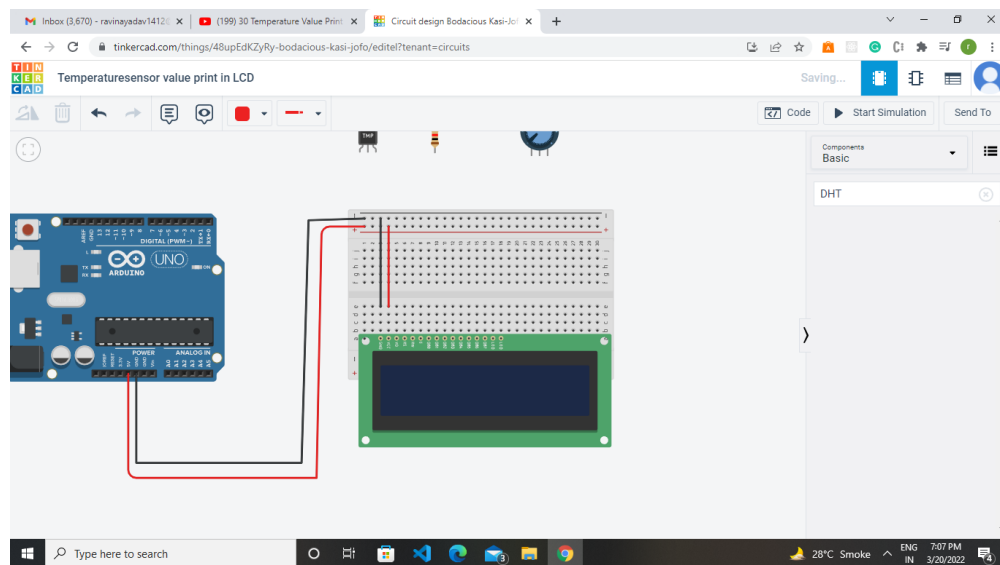

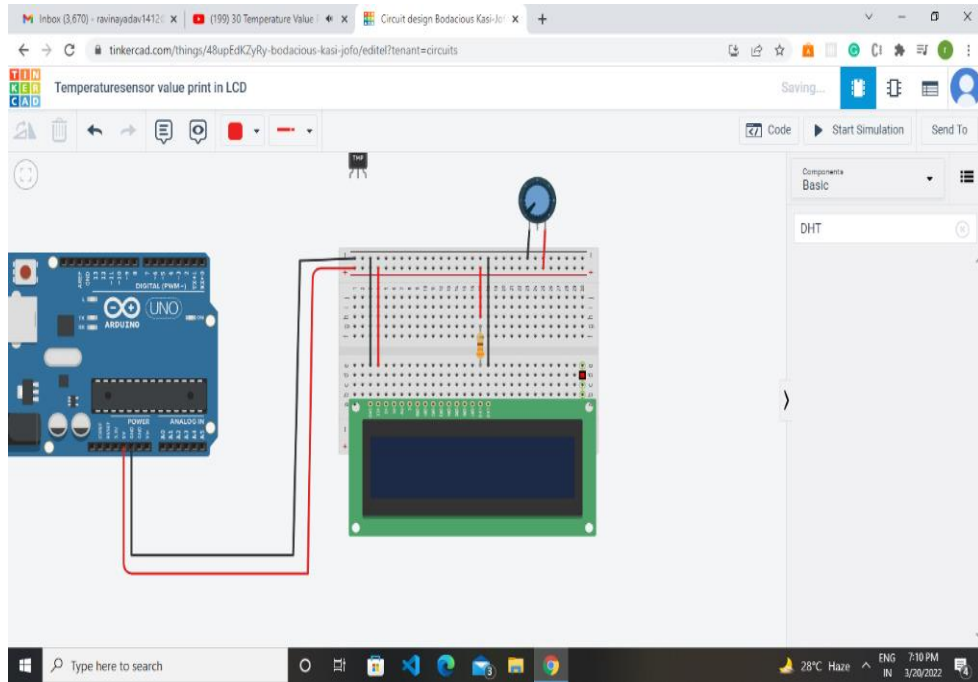

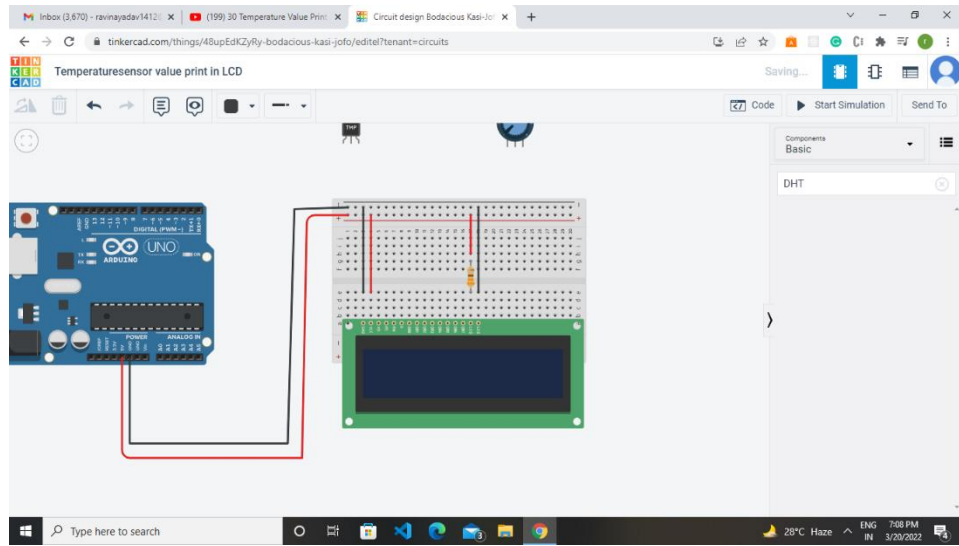

Step 3: Similarly drag all the needed components on the screen like breadboard, LCD, potentiometer, resistor and temperature sensor like tmp36 (DHT is not available tinkercad so we will use tmp36.)

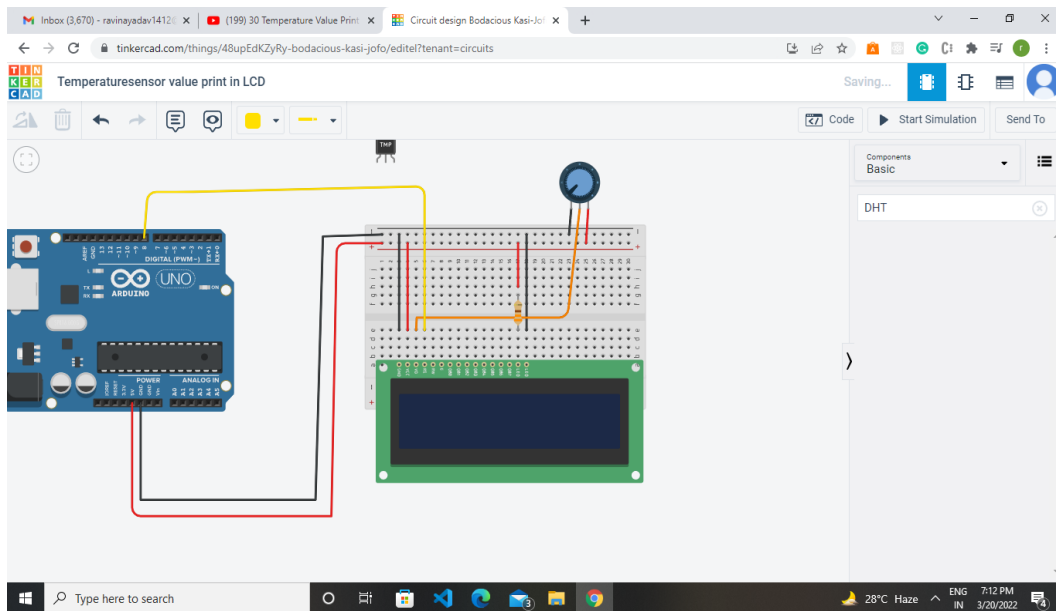

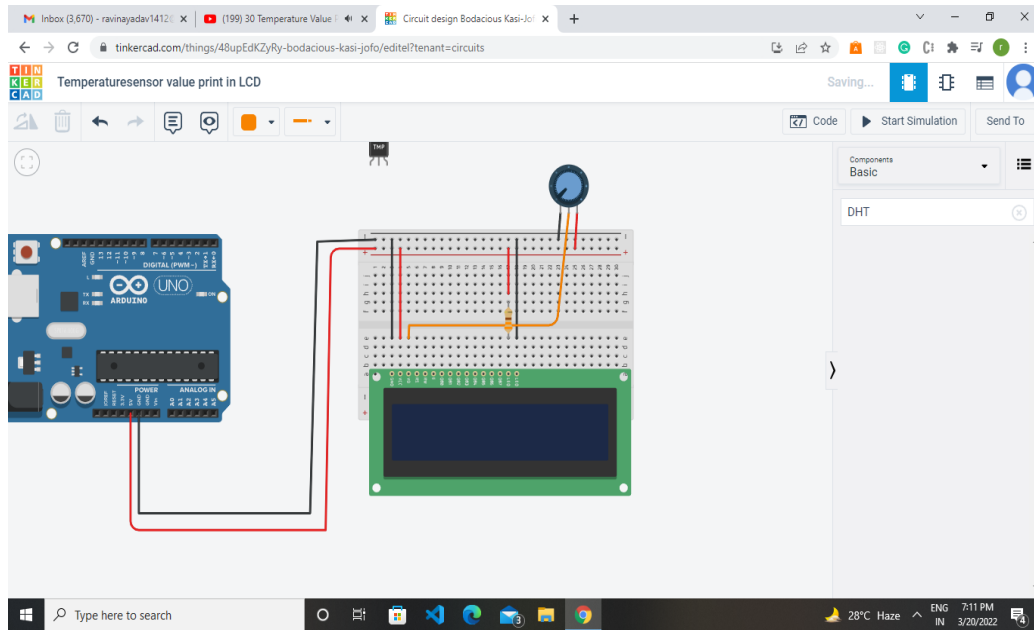

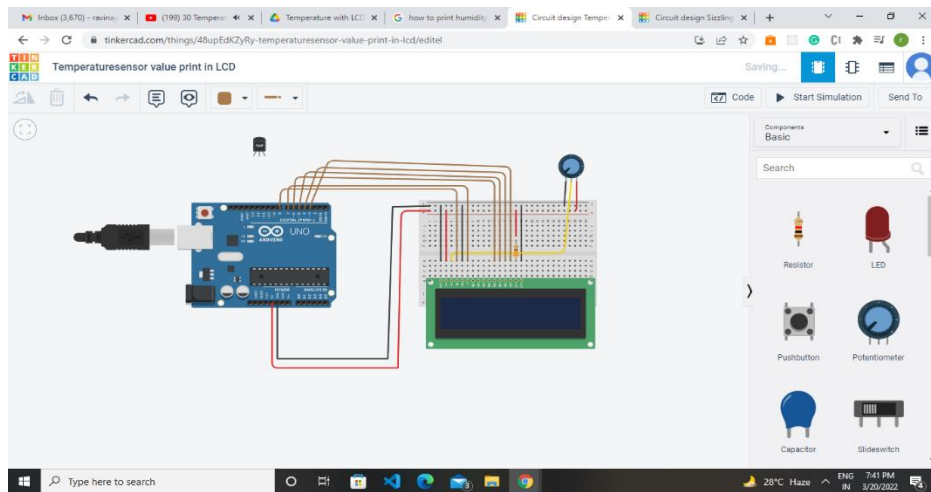

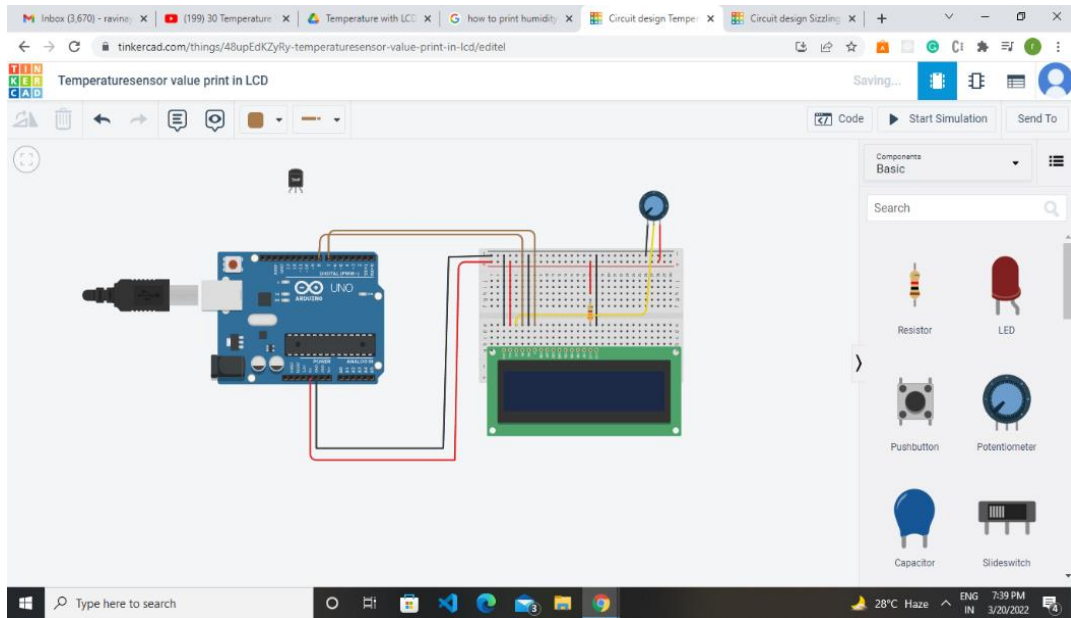

Step4: Now we need to make all the connections, arduino LCD connection and tmp36 with arduino.

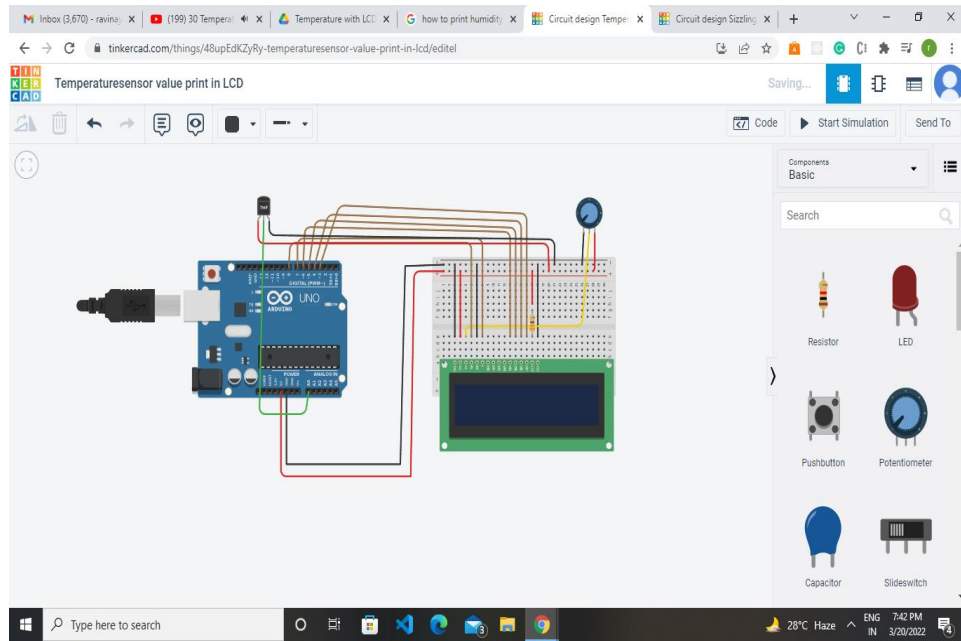

- a. Connect **5v** of arduino with **5v** of the LCD
- b. Now we will connect negative pin (**GND**) with **Gnd**
- c. Connect potentiometer positive, negative terminal with gnd and **5v** of the LCD and connect middle of the potentiometer with the **Vo** pin of the LCD.
- d. Connect LCD anode with the **5v** pin of the Arduino and cathode pin with resistor and the resistor with the **GND** of the Arduino.
- e. **Rs** pin of the LCD with the **8** of Arduino
- f. **Rw** pin with **GND**
- g. **E** pin with **7**
- h. **D4** pin the **6**
- i. **D5** pin **5**
- j. **D6** pin **4**
- k. **D7** pin **3**
- l. Now we need to connect temperature sensor, power pin of tmp36 will be connected to **vcc** of arduino and negative pin will be connected to the **GND** of arduino.
- m. And output pin will be connected to **A0** of arduino.

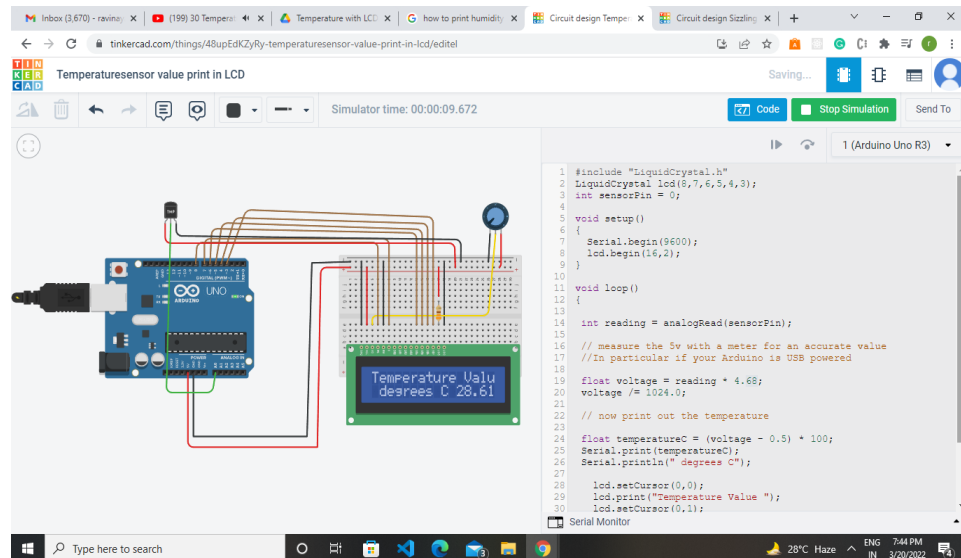

Step4. After making all the connections we need to write the code and start simulation in tinkercad.

Code:

```
#include "LiquidCrystal.h"
LiquidCrystal lcd(8,7,6,5,4,3);
int sensorPin = 0;

void setup()
{
  Serial.begin(9600);
  lcd.begin(16,2);
}

void loop()
{

  int reading = analogRead(sensorPin);

  // measure the 5v with a meter for an accurate value
  //In particular if your Arduino is USB powered

  float voltage = reading * 4.68;
  voltage /= 1024.0;

  // now print out the temperature

  float temperatureC = (voltage - 0.5) * 100;
  Serial.print(temperatureC);
  Serial.println(" degrees C");

  lcd.setCursor(0,0);
  lcd.print("Temperature Value ");
  lcd.setCursor(0,1);
  lcd.print(" degrees C");
  lcd.setCursor(11,1);
  lcd.print(temperatureC);

  delay(100);
}
```

Output:
